

One Wrong Move 014: Free Play Copy, Go, And Othello

Generated by Codex on 2026-05-03 for /Users/kevinhegg/Desktop/one-wrong-move.

Final Response / Summary

This revision fixes the Free Play result screen so it uses Free Play scoring language, retires Maze Exit from normal play, confirms the mini Go family, and adds two production mini Othello/Reversi puzzles. Ladder Run remains high-stakes: one wrong committed move ends the run. Three-Set Free Play remains lower-stakes: wrong attempts add mistakes and score is lower-is-better time plus penalties.

Repo State Summary

- Started from branch main at fe7f486 Merge Sudoku and Minesweeper puzzles.
- Created feature branch freeplay-copy-go-othello.
- Working tree was clean before changes.
- Remote: origin git@github.com:KevinHegg/one-wrong-move.git.
- No nested repo was present beyond ../.git.

Git Commands Run

- `pwd, git status --short, git branch --show-current, git log --oneline -10, git remote -v, find . -maxdepth 3 -name .git -type d, ls -la.`
- `git switch -c freeplay-copy-go-othello || git switch freeplay-copy-go-othello.`
- Validation commands listed below, plus `git diff --check`.
- Commit/merge/push commands are run after this PDF exists and validation remains green.

Files Created Or Changed

- `public/puzzles.js`: Othello puzzle generators, validators, selection metadata, Maze Exit retirement.
- `public/symbols.js`: Othello symbol pack.
- `public/game.js`, `public/index.html`, `index.html`: Free Play-specific result labels/copy.
- `public/style.css`: Othello board/disc rendering.
- `public/lab.html`, `public/lab.js`: Othello lab filter and metadata.
- `scripts/validate-othello.js`: new Othello, Maze Exit, Free Play copy, and placement validator.
- `scripts/validate-freeplay.js`, `scripts/validate-pattern-systems.js`, `scripts/validate-survival.js`: updated assumptions for Maze Exit/Othello and Free Play copy.
- `README.md`, `docs/game-design.md`, `docs/pattern-systems.md`, `docs/symbol-system.md`: updated design and implementation notes.
- `docs/codex-reports/screenshots/014-*.png`: raw screenshots.

Free Play Copy Bug

The Free Play completion panel reused Ladder result labels such as "Ended on" and "More levels is better." It now sets result labels dynamically. Free Play shows solved count, active time, base time, mistakes, penalty, score, and the formula: "Lower score is better. Score = rounded-up solving time + 10s per mistake." Ladder still shows levels completed, run time, ended-on level, end reason, last puzzle, and per-level limit.

Maze Exit Retirement

Maze Exit is now retired from Ladder Run and Three-Set Free Play because the reachable exit was too trivial and too visually obvious. It remains in the lab as a route-map baseline and validator example. Maze Key Exit and Maze Bridge Repair stay available because they require planned choices or exact repair sets.

Mini Go Family

The production Go family remains Go Capture Max and Go Liberties. Go Capture Max computes capture scores and requires one best capturing move. Go Liberties computes the exact liberty set of a marked group. Selection rules avoid back-to-back Go puzzles and avoid crowding Free Play with more than one Go puzzle.

Othello Family

Puzzle	Mode	Rule	Validator
Othello Best Flip	chooseOne	Black chooses the legal move that flips the most white discs.	Computes legal moves and flip counts in all eight directions; requires one unique best move with legal decoys.
Othello Mark All Flips	multiSelect	Black plays the marked move; select every white disc that would flip.	Computes the exact flip set from the marked square in all eight directions.

Validation Results

- `node --check public/config.js public/symbols.js public/scoring.js public/puzzles.js public/game.js public/lab.js`: passed.
- `node scripts/validate-freeplay.js`: passed.
- `node scripts/validate-othello.js`: passed for 300 samples per Othello type and 300 dates x 5 attempts for placement.
- `node scripts/validate-pattern-systems.js`: passed, 41 total types, 37 active.
- `node scripts/validate-puzzles.js`: passed, 4500 daily rounds.
- `node scripts/validate-survival.js`: passed, 300 dates, five attempts, first 50 levels.
- All other existing `scripts/validate-*.js` scripts passed.
- `git diff --check`: passed.

Browser Verification Results

- `python3 -m http.server 8080 -d public` served the app.
- `http://127.0.0.1:8080/` loaded without console errors.
- Free Play result screen used the corrected lower-is-better copy and no Ladder result labels.
- Ladder Run still ended immediately on a wrong committed move and retained Ladder result language.
- Maze Exit appeared only as retired/lab-only in the lab.
- Go Capture Max, Go Liberties, Othello Best Flip, and Othello Mark All Flips rendered and validated visually.
- Othello Mark All Flips accepted exact selected discs and showed correct feedback.

Local Run Instructions

Open `public/index.html` directly, or run:

```
python3 -m http.server 8080 -d public
```

Then visit `http://localhost:8080`. The lab is at `http://localhost:8080/lab.html`.

Netlify / GitHub Pages Notes

- Netlify build command: leave blank.
- Netlify publish directory: `public`.
- Root `index.html` remains updated for GitHub Pages support.

Main Branch Update Status

At PDF generation time, validation had passed and the feature branch was ready to commit, merge into `main`, revalidate, and push. The final Codex response records the actual commit, merge, and push status after those steps.
