

One Wrong Move - Lab Feedback Upgrade Report

Generated May 4, 2026 from `/Users/kevinhegg/Desktop/one-wrong-move`.

Final Response / Summary

Upgraded `public/lab.html` and `public/lab.js` into a serious local playtesting and feedback tool. The lab now supports Explore, Review Queue, Feedback Summary, and Export sections. Puzzle cards keep answer hidden/shown behavior and now add Try Blind playtesting, ratings, decisions, tags, notes, direct links, saved review badges, and exportable feedback records.

Feedback is local-only in `localStorage` under `oneWrongMove.labFeedback.v1`. No backend, account, analytics service, personal data, or external runtime dependency was added.

Repo State Summary

- Working folder: `/Users/kevinhegg/Desktop/one-wrong-move`
- Feature branch: `lab-feedback-upgrade`
- Preflight status: clean baseline on `main`; no nested repo beyond `./.git`.
- Main branch update status at report generation: pending final commit, merge, validation, and push workflow.

Git Commands Run

- `pwd, git status --short, git branch --show-current, git log --oneline -10, git remote -v, find . -maxdepth 3 -name .git -type d, ls -la`
- `git switch -c lab-feedback-upgrade || git switch lab-feedback-upgrade`
- `node --check ...` syntax checks
- `for f in scripts/validate-*.js; do node "$f"; done`
- `git diff --check`

Files Created Or Changed

File	Change
<code>public/lab.html</code>	Added lab navigation, Explore filters, Review Queue, Feedback Summary, and Export sections.
<code>public/lab.js</code>	Added local feedback model, Try Blind sandbox, rating panel, queue builder, summary dashboard, direct links, and JSON/CSV/Markdown/ChatGPT exports.
<code>public/style.css</code>	Added lab UI styling for filters, badges, playtest states, rating controls, summary tables, export controls, and toast messages.
<code>scripts/validate-lab-feedback.js</code>	New static and generation validator for lab feedback features and main-game isolation.
<code>docs/lab-feedback.md</code>	New usage guide for rating meanings, tags, export tools, localStorage, and privacy.
<code>README.md</code>	Documented lab feedback and export tools.

docs/game-design.md	Added lab feedback loop and playtesting rationale.
docs/pattern-systems.md	Added playtesting feedback strategy for editing the puzzle pool.

Lab Feedback Design

The lab now separates exploratory browsing from review work. Explore is for inventory and filters. Review Queue is for targeted playtest passes. Feedback Summary turns local notes into edit decisions. Export turns the browser-only data into artifacts Kevin can hand back to Codex.

Rating Model

Axis	Scale
Fun	1 boring, 3 okay, 5 excellent
Difficulty felt	1 trivial, 3 right, 5 brutal
Clarity	1 confusing, 3 okay, 5 crystal clear
Fairness	1 arbitrary, 3 okay, 5 elegant

Decision Model

- **Keep**: production-worthy.
- **Tweak**: promising but needs tuning.
- **Cut**: remove from normal play.
- **Needs more testing**: not enough evidence yet.

Tag Model

Supported tags include too easy, too hard, confusing, boring, fun, unfair, ambiguous target, unclear instructions, symbol unclear, too much trivia, too much arithmetic, visually noisy, visually excellent, satisfying, needs better example, answer felt arbitrary, great for Ladder, great for Free Play, and lab only.

localStorage Schema

Records are stored under `oneWrongMove.labFeedback.v1` with id, created/updated timestamps, puzzle identity, source world, answer mode, target type, difficulty, seed, attempt, level number, break signature, context, blind result, solve time, wrong attempts, ratings, decision, tags, notes, confusion reason, and suggested change.

Export Formats

- JSON: versioned full export with schema and summary by puzzle type.
- CSV: one row per feedback record for spreadsheet review.
- Markdown: grouped Keep/Tweak/Cut/Too Easy/Too Hard/Confusing/Best/Worst summary.
- ChatGPT-ready prompt: Markdown summary wrapped in a next-tuning prompt.

Validation Results

Passed:

- `node --check public/config.js public/symbols.js public/scoring.js public/puzzles.js public/game.js public/lab.js`
- `node scripts/validate-lab-feedback.js`
- `for f in scripts/validate-*.js; do node "$f"; done`
- `git diff --check`

Browser Verification Results

- Loaded `http://127.0.0.1:8080/lab.html` with no browser console errors.
- Saved a sample feedback record, reloaded, and verified persistence.
- Verified direct link `lab.html?type=othello-best-flip&seed=2026-05-03&attempt=2` loads the requested sample.
- Verified export preview contains the ChatGPT-ready prompt.
- Loaded `http://127.0.0.1:8080/` and confirmed Ladder Run and Three-Set Free Play still appear with no console errors.

Local Run Instructions

```
python3 -m http.server 8080 -d public
```

Then open `http://localhost:8080` for the game or `http://localhost:8080/lab.html` for the lab.

Lab Instructions

1. Choose a seed and attempt.
2. Use Explore filters or Review Queue presets.
3. Use Try Blind, Show Answer, Regenerate Variant, and Copy Direct Link on puzzle cards.
4. Save ratings, decisions, tags, and notes.
5. Review the Feedback Summary dashboard.
6. Export JSON, CSV, Markdown, or the ChatGPT-ready prompt.

Netlify / GitHub Pages Notes

Netlify remains a static deploy with publish directory `public`. The root `index.html` remains the GitHub Pages entry point for `https://kevinhegg.github.io/one-wrong-move/`. The lab uses only local browser storage and static assets.
