

One Wrong Move Logic Redesign Report

Generated on May 2, 2026 for /Users/kevinhegg/Desktop/one-wrong-move.

Summary

Redesigned One Wrong Move into a logic-first daily puzzle for adults, replacing the easier rule-violation boards with symbolic reasoning systems.

The app now uses Rule Rows, Rotation Logic, and Mirror Trap rounds. Each round has one hidden expected rule model and exactly one rendered symbol that violates it.

The mobile-first phone shell, compact header, scoring, feedback, and share flow remain static HTML/CSS/JavaScript with no external frontend libraries.

-

Design Rationale

- The prior memory version failed because recall is not puzzle reasoning.
 - The prior mechanics version fixed memory but felt too much like a children's visual odd-one-out game.
 - The new boards ask players to infer row grammar, rotational sequence, and symbolic mirror mappings from the board itself.
 - Symbols carry the puzzle state directly, so the answer is not color-dependent or a trivial single-square difference.
-

Round Types

- Round 1: Rule Rows. Each row follows the same five-symbol cycle, shifted one place. One glyph breaks that row grammar.
- Round 2: Rotation Logic. Arrows rotate a quarter-turn across each row while each new row starts one arrow tick later. One arrow misses the sequence.
- Round 3: Mirror Trap. The right side mirrors the left, but source symbols transform into paired counterparts. One right-side symbol uses the wrong partner.

Local Run Instructions

- Open public/index.html directly in a browser.
- Or run: `python3 -m http.server 8080 -d public`, then visit `http://localhost:8080`.

Netlify Deploy Settings

- Build command: leave blank
- Publish directory: public

Verification Checklist

- Confirmed package.json exists, this is a Git repo, current branch is mechanics-redesign, required public files exist, and no nested repository exists.
- Ran `node --check public/game.js` and `git diff --check`.
- Opened public/index.html in the browser and verified the logic redesign screen renders.
- Ran `python3 -m http.server 8080 -d public` and loaded index.html with HTTP 200.
- Fresh browser validation reported no console errors.
- Validated exactly one answer for Rule Rows, Rotation Logic, and Mirror Trap.
- Verified wrong taps increment mistakes and show brief feedback.
- Verified correct taps highlight the answer, show explanation, and advance only after the button.
- Verified completion screen, scoring formula, and share text with the new round names.
- Compared to the previous version, the boards now require sequence inference and mapping inference rather than a plain visual odd-one-out scan.

Inspect, Commit, And Push Commands

```
git status --short
git diff -- public/index.html public/style.css public/game.js README.md docs/game-design.md
open public/index.html
open docs/codex-reports/003-logic-redesign-report.pdf
git add public/index.html public/style.css public/game.js README.md docs/game-design.md
docs/codex-reports/003-logic-redesign-report.pdf docs/codex-reports/screenshots/003-*.png
git commit -m "Redesign puzzle logic"
git push origin mechanics-redesign
```

READY

MISTAKES 0

LOGIC-FIRST DAILY PUZZLE

Infer the rule. Tap the symbol that breaks it.

Three boards, each with its own visual rule system. No memory tricks, no plain spot-the-difference.

ROUND 1 OF 3

MISTAKES 1

ROUND 1: RULE ROWS

Each row uses the same five-symbol recipe, shifted one place. One glyph breaks the row grammar.

Compare rows as sequences, not as pictures. Tap the symbol that does not belong in its row.

Try again

The row should be a shifted version of the others. Look for the broken recipe, not the rarest symbol.

Restart

ROUND 1 OF 3

MISTAKES 1

ROUND 1: RULE ROWS

Each row uses the same five-symbol recipe, shifted one place. One glyph breaks the row grammar.

Compare rows as sequences, not as pictures. Tap the symbol that does not belong in its row.

Correct

That glyph breaks the shifted row sequence.
